ABOUT ME

Dynamic and passionate Android Developer with 9 years of experience. Proficient in Java, Kotlin, Swift, Dart, Reactnative and Android Compose, I excel in UI/UX design web development, Cloud Engginer while also possessing strong skills in Flutter (Dart), multimedia, and database management (MySQL, SQL Server, Oracle). Graduated with a Bachelor of Technology in 2016, I am eager to contribute my expertise to your team and create innovative solutions in a collaborative environment.

EDUCATION

- 2016 Politeknik negeri Jakarta
Bachelor of Informatic and Computer Engineering
- 2016 Asia e University - Malaysia's Digital Global University
Bachelor of Information and Communication Technology (HONS)

WORK EXPERIENCE

1. Nov 2016-Mar 2018
Junior Android Developer - PT. Qirani Berkah Lestari
 - Spearheaded the design and development of the Katunklik.co.id app, ensuring high-quality user experience through unit testing, bug fixing, and adherence to best practices.
 - Utilized cutting-edge tools including Android Developer, Java, Volley, and data binding while implementing the MVP architectural pattern.
2. Mar 2018-Apr 2019
Fullstack Mobile Developer - PT. HNR Pesona Indonesia
 - Designed and developed a dynamic cross-platform mobile application, Hike n Run, utilizing Flutter and Dart for seamless user experiences.

- Implemented rigorous unit testing to ensure code reliability and performance, driving superior quality.
- Skillfully performed bug fixing to enhance application functionality and user satisfaction.
- Leveraged Android Studio alongside a robust MVP pattern to streamline development processes and improve code organization.

3. Apr 2019-May 2020

Android Developer - PT.Indocyber Global Teknologi

- Spearheaded the design and development of an innovative Marketplace Insurance application, leveraging Kotlin and Retrofit for seamless data integration.
- Enhanced application performance through effective bug fixing and optimization.
- Utilized MVVM architecture and data binding techniques to ensure high-quality user experiences.
- Designed and developed a robust Marketplace Insurance app for seamless user experience.
- Resolved critical bugs, enhancing app performance and reliability for users.
- QA test : Responsible for developing manual testing strategies, creating complex test plans and test cases, and performing various types of manual testing (functional, integration, system, UAT). Able to analyze test results, identify root causes, and provide recommendations for improvement. Experienced in working independently and in a team, and has excellent communication skills in conveying test findings.

4. May 2021-Nov 2021

Android Developer - PT.Lawencon International

- Spearheaded the design and development of a high-performance Sales Tools app, ensuring robust functionality through meticulous bug fixing and comprehensive unit testing.
- Leveraged Android Studio, Java, and Kotlin to deliver seamless user experiences while efficiently integrating JSON and REST APIs.
- Implemented the MVVM architectural pattern to enhance code maintainability and scalability.

5. Jan 2022-Dec 2024

IOS Developer - Sehatku (Remote Working)

Client : Fastwork.id

"SehatKu" is an innovative iOS application designed to empower users to perform initial self-diagnoses for various health conditions, including the early detection of symptoms related to infectious diseases. This application leverages knowledge-based algorithms and machine learning (adapted from the "COVID Diagnosis" project experience on Android) to analyze user-inputted symptoms and provide risk assessments along with recommendations for further action.

Key Features:

- **Symptom-Based Self-Diagnosis:** Users can input their experienced symptoms through an intuitive interface. The application then processes this information to provide an initial risk analysis and relevant information regarding potential health conditions.
- **Trusted Health Information:** Offers easy access to curated and reliable health information on various diseases, preventive measures, and healthy lifestyle guidelines.
- **Integration with Healthcare Services (Potential):** In the future, the application could be integrated with local healthcare services to facilitate users in finding nearby medical facilities or consulting with healthcare professionals.
- **Engaging User Interface:** Adopts best-practice UI/UX design principles for iOS, ensuring a seamless, informative, and engaging user experience (drawing from UI design experience for gaming and catalog management applications).
- **Data Security and Privacy:** Prioritizes the security and privacy of user data in accordance with applicable healthcare application standards.

Technologies Used:

- **Swift:** Primary programming language for native iOS application development.
- **UIKit:** Framework for building the application's user interface.
- **Core Data / Realm:** For secure and efficient local data storage (e.g., user symptom history).
- **URLSession:** For communication with the backend (if any, for health information updates or service integration).
- **Machine Learning Framework (Core ML):** Potential use for implementing symptom-based diagnosis models (based on Android project experience).
- **Maps and Location (MapKit):** Potential integration for nearby healthcare facility search features.

My Contribution:

In the "SehatKu" project, I would be responsible for the design and development of the application's core features using Swift and relevant iOS frameworks. My experience in developing diagnostic applications on Android, understanding of API integration (if required for health data updates), and ability to design engaging user interfaces would be crucial in the development of this application. I would focus on writing clean, efficient code that adheres to iOS development best practices.

- QA Test : Responsible for creating more than 200 test cases for feature Covid and successfully identified 15 critical bugs.

6. May 2022-Aug 2023

Frontend Developer - PT. Uninet Media Sakti

Main Project : **META DC**

Skill : Angular, Frontend, UI/UX, JavaScript, TypeScript, HTML, CSS, Responsive Design, API Integration, Git

Translated design mockups and wireframes into interactive and pixel-perfect **UI/UX components** using **Angular**.

Ensured high code quality through **clean code practices** and **code reviews**, along with continuous maintenance of **live applications**.

Responsible from the initial development phase through to **deployment** and maintenance of **Angular-based** web applications.

7. Oct 2023-Oct 2024

Android Developer – Sigmatech

Job Summary:

As a Lead Android Developer, you will be responsible for the design, development, and maintenance of the BSI Mobile application for the Android platform. You will lead a team of developers in creating a robust, efficient application that delivers a seamless user experience. This role requires a deep understanding of Android application architecture, API integration, testing, and effective leadership skills, with specific expertise in the technologies utilized in the development of BSI Mobile.

Key Responsibilities:

- **Application Design and Development:** Lead the architectural design of the BSI Mobile application using Android Studio, Java, and Kotlin to ensure a strong and scalable application foundation.
- **Feature Development:** Develop innovative new features that align with the business needs of BSI Mobile.
- **Troubleshooting and Maintenance:** Perform comprehensive bug fixing, write and execute unit tests to ensure code quality, and conduct regular application maintenance.
- **API Integration:** Implement efficient integration with REST APIs and JSON data formats using the MVVM architecture, RxJava, and Coroutines for optimal data management.
- **Performance Optimization:** Identify and implement strategies to optimize application flow and improve overall performance.

- **Cross-Team Collaboration:** Work closely with other teams such as UI/UX designers, product owners, and backend teams to ensure aligned product vision and successful implementation.
- **Documentation:** Create and maintain relevant technical documentation related to architecture, code, and development processes.
- **Standards Development:** Implement and promote coding standards and best practices in Android development across the team.

Technologies Used: MVVM, RX Java, Coroutines, REST APIs, Jetpack Compose, Git

8. Oct 2024 - Oct 2025
Android Developer – Robert Walters

Job Summary:

As an AI trainer in the realm of Kotlin mobile development, my role is to empower developers to integrate artificial intelligence into their products. I guide them from understanding fundamental machine learning and deep learning concepts to practical implementation using libraries like TensorFlow Lite and ML Kit within Kotlin code, ultimately ensuring the creation of intelligent, efficient, and responsive Android applications.

SKILL

Programming:

PHP, Javascript, Angular js, Typescript, Vue JS, Html 5, CSS 3, Bootstrap, SAS, Codeigneter, Laravel, Docker, Javascript ES6, GIT controller, RXJS, Angular Material.

FLUTTER :

- State Management Using BLoC and MVVM Pattern
- CI/CD : Gitlab/Bitbucket
- Local Storage : Sqlite
- Firebase : Firebase Firestore, Firebase Crashlytics, FCM
- Remote Database : Implementation Rest API using
- UI : Stateless, Stateful Widget, Webview Widget
- DI : Provider, getit, Riverpod
- Experience Deploy application to google playstore and ios Developer.

ANDROID : (Java & Kotlin)

- UI with Jetpack Compose
- MVVM Architecture : Implementation Viewmodel, LiveData, stateFlow
- Android Jetpack Component : Room Database, Navigation Component, Work Manager, Paging, DI : Dagger 2.
- Local Storage : Room database, Shared Preferences, DataStore.
- Remote Database : Implementation Rest API using Retrofit dan volley
- Asynchronous Program : menggunakan Coroutines & Flow untuk menangani operasi async
- Performance Optimization : using **android profiler**, **systrace** for improve application performance.
- Security & Authentication : Using SSL Pinning, Encryption, OAuth2, Firebase Auth.
- Firebase : Firebase Firestore, Firebase Crashlytics, FCM
- CI/CD : Github / Gitlab, Bitrise.
- Unit Testing & UI Testing : Using JUnit, Espresso, Mockito, Robolectric.
- Debugging Tools : Android Studio Profiler, Logcat, Proxy.

Mobile Programming :

Android Developer Experience 7 Years

Kotlin Experience 4 Years

Java Experience 3 Years

Swift Experience 2 Years

Dart Experience 2 Years

Reactnative Experience 1 Years
